                         .SBTTL GET_SENDIO - Handle SENDIO and SENDIYPE inputs
                :++
           646
                  FUNCTIONAL DESCRIPTION:
            648
                         Handle the SENDTYPE and SENDTO parameters and set up BRK.
                         Privilege is checked for all but BRK$C_DEVICE writes.
                         Writes to same username are allowed without privilege.
                  CALLING SEQUENCE:

The working set limit was 2100 pages.
155190 bytes (304 pages) of virtual memory were used to buffer the intermediate code.
There were 150 pages of symbol table space allocated to hold 2771 non-local and 66 local symbols.
1317 source lines were read in Pass 1, producing 24 object records in Pass 2.
53 pages of virtual memory were used to define 51 macros.
